---

## CARRIER OBJECTIVE

Developer with 2.5+ years of experience in software development, specializing in React.js, JavaScript, and jQuery. Proven track record of developing and maintaining high-quality web applications, collaborating with cross-functional teams to deliver impactful solutions. Strong in requirements analysis, logical problem-solving, and optimizing user experiences. Adept at adapting to new technologies and continuously improving product functionality.

## SKILLS

**Programming Languages:** React.js, JavaScript (ES6+), HTML5, CSS3, jQuery, Typescript, Node.js, Express.js, tailwindcss

**Version Control & Collaboration:** GitHub, GitLab, Agile Scrum,

**Other Tools:** Postman

**Database Management:** MongoDB

**Other Skills:** Proficient in Prompt Design

## WORK EXPERIENCE

**Inductive Quotient Analytics** | UI/UX Developer -1

**Jan 2023 – Present**

- Rebuilt a legacy EDC application using React 18 and Redux, enhancing the user experience and incorporating clinical data collection and validation features to improve the data management process.
- Integrated ASP.NET Core backend for data management, ensuring seamless handling of user authentication, clinical data, and communication between front-end and backend systems.
- Worked closely with cross-functional teams to optimize the performance of large forms in the application, reducing loading times by 40% and ensuring efficient data processing.
- Designed and developed Global-Portal-User application to manage clinical trial projects across multiple departments, allowing for better data tracking and project assignment.
- Implemented best practices and data caching mechanisms to improve application performance and enhance clinical data accuracy.
- Mentored junior team members, ensuring smooth integration of clinical data handling concepts and technical skills to improve project delivery
- Developed and maintained multiple React.js applications, delivering fast, responsive, and accessible UIs across devices and browsers.
- Built interactive dashboards and dynamic visualizations using **Google Charts**, **Apache Charts**, **ECharts**, and **React-Leaflet**, effectively handling large datasets and real-time data streams.
- Integrated **RESTful APIs** for seamless communication between front-end and backend services (Java and Python-based), ensuring smooth data retrieval and updates.
- Collaborated with **UI/UX teams** to translate design mockups into intuitive user interfaces, enhancing overall user experience.
- Applied **unit testing**, **peer code reviews**, and **Git version control** to maintain code quality and consistency across the team.
- Contributed to full-stack development using **Node.js** and **Express.js**, improving application functionality and scalability..
- Leveraged tools like **Webpack** and **Babel** to optimize application performance and ensure cross-browser support.
- Worked in Agile Scrum teams using **Azure DevOps**, ensuring transparency in task tracking and on-time project delivery.
- Skilled in prompt engineering to craft effective inputs for AI tools. Proficient in leveraging AI technologies to enhance productivity and streamline workflows.

## Projects

### Project: Electronic Data Capturing Tool (EDC):

Developed a **React.js**-based tool to digitize and streamline the process of capturing, validating, and storing research data for CROs, replacing traditional methods like Excel and paper. The tool allows dynamic form generation and ensures data accuracy and accessibility.

- Designed and developed dynamic, user-friendly forms and interfaces using **React.js**, enabling efficient data entry and validation.
- Worked closely with the back-end team to integrate the **Java**-based backend for smooth data storage and retrieval.
- Optimized application performance to handle large datasets, ensuring fast and responsive user interactions.

### Project: Site Insights - Data Visualization Dashboard:

Developed a **React.js**-based data visualization dashboard to display insights from pharmaceutical research conducted over the years. The platform allows users to filter data using custom filters and visualize insights interactively using libraries like **ECharts** and **ReactLeaflet**.

- Designed and implemented dynamic, interactive data visualizations using **ECharts** and **React-Leaflet**.
- Developed custom filter functionality, enabling users to filter insights based on specific criteria.
- Collaborated with the back-end team to integrate **Python** APIs for real-time data retrieval and display.
- Optimized front-end performance to ensure smooth and responsive user interactions.

### Project: Prabandhan – Client Management Tool:

Developed a **React.js**-based application for **Aurobindho Pharma** to manage and record data related to members (vendors, sponsors, etc.), study agreements, and study phases. The tool replaces traditional methods like Excel sheets, streamlining the process of recording and accessing critical study data.

- Designed and implemented interactive, user-friendly interfaces using **React.js** to manage member and study data efficiently.
- Integrated with **Java**-based backend to ensure smooth data flow and storage.
- Optimized the front-end for better performance, enabling quick access and updating of data related to study agreements and phases.

## EDUCATION

**Andhra University Collage of Engineering**

**2017 - 2021**

- Civil Engineering –BE | CGPA: 6.95/10

## DECLARATION

I hereby declare that all the details provided above are true to the best of my knowledge.
